Fixed louvers

Movable louvers

### A modern solution for protecting buildings from excessive sunlight

- louvers are recommended for use in conjunction with large glazed constructions in order to reduce sunlight exposure of interior spaces
- the system includes: 100 - 400 mm aerofoil blade profiles, 40 and 80 mm "Z" shaped profiles and rectangular profiles
- louvers mounted to walls, curtain walls as well as windows
- joints for mounting profiles at 15°, 30° and 45° degrees relative to the horizontal plane
- movable louver variant - automatically controlled position
